

Eurovac

The Ultimate in Transit Vehicle Cleaning Technology

CLEANER VEHICLES

Powerful vacuum picks up dirt, dust and debris quickly. No extra labor costs are incurred to go back and clean seats and windows.

REDUCED OPERATING COSTS

Clean vehicles faster with our high powered systems designed to maximize efficiency and convenience. A Eurovac high vacuum, low volume system can be easily and inexpensively filtered compared to high volume systems, and has overall low maintenance costs.

In northern climates the filtered air can be returned into the building, eliminating the need for very expensive air make-up systems.

SAFER WORKING ENVIRONMENT

Return air is completely filtered and no airborne dust is created, as is the case with cyclone systems. Workers do not have to handle contaminated materials.

Significantly quieter than noisy high volume systems.

Centrifugal Eurovac multi-stage pump with multiple cartridge filters and automatic compressed air "pulse-jet" cleaning (with pre-separator depositing debris directly into dumpster).
